

Drawing Title: Theoretical Containment (Second Version)

Drawing Number: TC-2 ("Theoretical Containment 2")

Description: This is a second level "theoretical" drawing to prepare you to see the siphon lift, vacuum lift system. (See Fluid Pull-Check Patents in Volume Three of The Solomon Series of books.)

Generation number (of drawing): Second Generation

Building material: The spaces represented in this drawing are lined with pink granite in the actual structure. (Pink granite likely constitutes 2% or less of the structure of the Great Pyramid.)

General Location within the Great Pyramid: Central core/lift system within the Great Pyramid

Height within Structure: From 98+ feet below the structure extending from the ground water table to the upper mid-body area of the "Upper Reservoir" (King's Chamber)

Dimensions of Chamber/Space: Various. This structure level by level changes pending technology, needs, and ability.

Electronic location: www.SolomonSeries.com

Literature Reference: [The Solomon Series: Great Pyramid Mystery Resolved](#)

Copyright: 2007 Ted Whidden,

Date of drawing: March 2007

Comments: We will see the ground well liner (Sub-terranean chamber) is different in dimension to the "ante-chamber" which is the upper most region of the currently known/recognized central lift system. We anticipate another near central lift offset from the "ante-chamber". See the book reference for details and explanations.

Special Thanks to Mrs. Tanya Taylor, Wade Strickland and the Drafting class at Washington-Holmes Technical Center for this drawing.

**Multi-Stage Fluid Pull-Check
(Antechamber To The Archaeologist)
(Central Vertical Lift)**
